Lyme Disease, The Need To Do More

That the Parliament recognises that Lyme disease is affecting many people across Scotland, including in Aberdeenshire; considers that there is a lack of awareness and education to prevent further infections in 2017; notes calls for the issues surrounding diagnosis and treatment to be explored further; further notes calls for public education on the dangers of tick bites and for doctors to become better informed so that patients are not left undiagnosed, and notes the support for Lyme Disease UK's campaign to help increase awareness of this disease.
