

Please support the 'Wake Up to Lyme' awareness campaign to prevent further Lyme disease infections this Summer

Lyme disease is a bacterial infection that is most commonly contracted by a bite from an infected tick. It is a growing problem in the UK and can be difficult to treat if not diagnosed early.

Lyme Disease UK is running a national campaign, '**Wake Up to Lyme**' with the aim of preventing tick bites and further Lyme disease infections this year.

We would be delighted if you would display the enclosed posters and leaflets either at your front/reception desk, waiting/serving areas, in your windows or on notice boards in your outdoor spaces.

One bite from an infected tick can change someone's life forever. Please help us to protect families and individuals in your community from suffering from the effects of this debilitating disease.

For further information, or if you would like more copies of the posters and/or leaflets please email admin@lymediseaseuk.com with your postal address, quantity and size of poster required. Thank you so much for your support!
