

Lesson Ideas for Secondary School Age

Lesson Ideas for Tick Awareness

Science

Click [here](#) to be taken to the NICE Lyme disease guideline which lists research and recommendations for research.

A US high school found the following to be useful when teaching about hypotheses and proof. Ask students to split into groups and research the following questions:

- Can you prove that *Borrelia burgdorferi* is not an intracellular disease?
- Can you prove that Lyme disease does not have a persistent form causing chronic infection?

Geography

- Researching tick prevalence can be used to highlight the impact of urbanisation and climate change

Graphic Design

- Create an infographic or poster to teach others about Lyme disease

Send copies of your posters to us for the chance to be featured on our social media accounts
